TECHNICAL
SPECIFICATION

THICKNESS : 3.0mm (±10%)
STANDARD SHEET SIZE : 8'x4' (±2%)

LAMINATION : Proper substrates must be used and careful banding procedures must be observed. Substrates should be of good quality plywood, high density particle board, or high quality board. The face of the substrate must be smooth and free of grease, wax, dust, chips and other foreign matter.

CUTTING & INSTALLATION : These PVC HPL Sheets can be cut, routed and drilled, with standard wood working tools or equipments (MERAKI recommends use of only diamond cutter blade to cut the sheet). All blades must be sharp to remove any burrs that may occur in the cutting process. We recommend the use of a smooth file to feather all corner edges. In case of using of hand cutters. The company is not liable for any complaints of de-lamination and other complaints.

BENDING AND FORMING : For bending the PVC HPL sheets make use of 4'x8mmX6Tee MERAKI Radius U-Groove Blade.

MAINTENANCE : Any cleaning agent containing acids, alkalis or abrasive should not be used to clean the laminate, exposure to sunlight should be avoided.

NOTE : Meraki warrants that all its products are free from manufacturing defects and perfectly ideal for use in normal conditions. In case of any claim, the liability of the company is only limited to the cost of the product only. Meraki is not liable for the color variations from batch to batch production. The sample swatches here only represent the designs, colors and finishes. They do not represent actual thickness. Kindly remove the protective film after 7 days of installation of PVC HPL Sheets.

Recommended to use for cutting of laminate sheet.
